

SHASHANK S. PABITWAR

DATA ANALYST | SQL | POWER BI | TABLEAU | PYTHON | EXCEL

Flemington, NJ | (480)876-3633 | spabitwa@asu.edu | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Data Analyst and Arizona State University graduate with workforce analytics experience supporting three stakeholder groups and end-to-end projects covering 9.36M consumer complaints, 20.93M flights, and 3.48M taxi trips. Builds validated SQL/Python workflows and decision-ready Power BI, Tableau, and Excel reporting with documented data-quality controls and limitations.

EDUCATION

Arizona State University, Ira A. Fulton Schools of Engineering | Tempe, AZ | May 2026

B.S. Computer Science; Minor in Data Science | GPA: 3.89/4.00 | Summa Cum Laude

Relevant Coursework: Database Management, Data Visualization, Machine Learning, Statistical Model Inference, Probability & Statistics, Applied Linear Algebra

PROJECTS & EXPERIENCES

[OrgPath](#) | Data Analyst | Aug 2024 - May 2026

- Built Tableau dashboards for more than 2000 employee profiles, using SQL, DAX, Power Query, and workforce KPI models to track succession readiness, talent density, retention risk, organizational health, and leadership-pipeline performance.
- Developed Python and SQL ETL workflows that combined data from HR, performance, and succession-planning sources into PostgreSQL analytics datasets; added automated data-quality checks that improved reporting accuracy across employee and assessment records.
- Partnered with HR, product, engineering, and executive stakeholders to automate 25 recurring reports, reduce manual reporting time by 60% and deliver clear data stories, forecasting views, and recommendations that supported workforce-planning decisions.

[Global Career](#) | Data Analytics Project Trainee | Aug 2025 - Dec 2025

- Delivered three client-themed analytics and quality-assurance projects, cleaning and normalizing a 35-product L'Oreal catalog across 13 brands and 10 categories into structured, analysis-ready data.
- Structured nine Intel sustainability milestones and validated three charity: water configurations against five outputs, applying data collection, normalization, categorization, validation, documentation, and reporting to produce traceable datasets, QA checks, presentation-ready findings, and decision-ready outputs.

CFPB Complaint Operations Analytics | Tableau, Snowflake, dbt, SQL | [GitHub](#) | [Dashboard](#)

- Modeled 9.36M CFPB complaints (2023-2025) through 15 dbt models; passed 31 tests and 6 reconciliations with 0 duplicate IDs, then published a Tableau dashboard that surfaced volume growth from 1.19M to 5.44M and 80.9% credit-reporting concentration.
- Analyzed channel and response metrics with explicit denominators: web intake reached 99.34% in 2025 while timely-response rates remained 99.55%-99.72%; recommended web-health and exception monitoring without implying causality.

U.S. Airline Operations & Delay Analytics | Excel, Power Query, SQL, Python, Statistics | [GitHub](#)

- Ingested 36 official BTS files covering 20.93M scheduled flights (2023-2025); built a DuckDB star-schema workflow, 7-sheet Excel analysis, and executed statistical notebook showing 2025 on-time performance at 76.3% versus 78.2% in 2023 and late-aircraft delays at 39.2% of reported delay minutes.
- Applied minimum-volume thresholds for fairer comparisons and found a 28.7% evening arrival-delay rate versus 13.4% in the morning; recommended later-day aircraft/crew recovery buffers while treating results as associations, not causal effects.

NYC Taxi January 2025 Analytics | Power BI, Power Query, DAX | [GitHub](#)

- Built a 3-page Power BI star-schema report for 3.48M trips; reconciled 3.25M valid and 224K excluded rows (93.55% validity) and surfaced approximately \$88M in gross passenger spend with time, zone, and data-quality views.
- Created validity-aware DAX measures and role-playing pickup/drop-off zone dimensions; retained excluded rows and blank rate codes for auditable reporting and repeatable row-count, boundary, and relationship checks.

PrepInterview AI Product Analytics Prototype | Tableau, SQL, Python | [GitHub](#) | [Dashboard](#) | [Live Product](#)

- Modeled 8,000 synthetic users and 125,044 events across funnels, cohorts, feature adoption, score progression, and AI reliability; passed 24/24 validation checks and published a four-dashboard Tableau Story with explicit synthetic-data disclosure.
- Defined an event taxonomy and metric dictionary, then demonstrated synthetic calculations for 12.0% mock completion, 44.3% week-1 retention, 24.5% week-4 retention, and 5.6-7.8 point score gains as product hypotheses - not production outcomes.

PixelPlanes Multiplayer Game | WebSockets, WebRTC, JavaScript | [Live](#)

- Built a deployed browser game with room-based multiplayer, real-time voice, client-side prediction/interpolation, and AI opponents; included as additional engineering work rather than an analytics claim.

TECHNICAL SKILLS

Analytics: SQL (joins, CTEs, window functions), Python (pandas, NumPy), Excel (PivotTables, XLOOKUP, SUMIFS), statistical analysis, data cleaning, validation, reconciliation

BI & Data: Power BI (Power Query, DAX, star schemas), Tableau, Looker/Looker Studio, Snowflake, dbt, PostgreSQL, DuckDB, R, AWS, Salesforce, Jira, SAS, Microsoft Azure, ETL/ELT, dimensional modeling, Azure Blob Storage

Business & Workflow: KPI definition, requirements gathering, stakeholder communication, cross-functional collaboration, data documentation, Git/GitHub, Jupyter, REST APIs, Agile/Scrum

CERTIFICATIONS

Google Analytics Certification (2026) | Salesforce Certified Tableau Desktop Foundations

IBM SkillsBuild Data Analytics Fluency Pathway (six credentials): Data Classification; Data Collection and Analysis; Data Preparation for Analysis; Data Visualization and Presentation; Data Usability for Organizations; Introduction to Inferential and Descriptive Statistics
